Good Morning-

Forwarding a message from Julius Fajardo regarding the registration review dockets for the fungicides fenamidone, thiophanate methyl/carbendazim and thiabendazole and salts. Based on the full docket table in the original message to Julius from David Epstein, I am expecting to see requests for comment on the insecticides and herbicides in the table also.

The deadline for comment submission is May 27, which will give Jane one day to breathe before retiring on May 28th. (Jane – we can talk tomorrow about how I can help).

-Jim

Subject: Registration Review Dockets Opening

Summary

With this document, EPA is opening the public comment period for several registration reviews. Registration review is EPA's periodic review of pesticide registrations to ensure that each pesticide continues to satisfy the statutory standard for registration, that is, the pesticide can perform its intended function without unreasonable adverse effects on human health or the environment. Registration review dockets contain information that will assist the public in understanding the types of information and issues that the Agency may consider during the course of registration reviews. Through this program, EPA is ensuring that each pesticide's registration is based on current scientific and other knowledge, including its effects on human health and the environment. This document also announces the Agency's intent not to open registration review dockets for endosulfan, tall oil fatty acids and K salts, thiophanate-ethyl, and thiazopyr. The registrants have decided not to support continued registration of these pesticides and, therefore, EPA is not planning to open dockets for these pesticides under the registration review program. EPA is also announcing the availability of an amended final work plan (FWP) for chlorinated isocyanurates.

Dates

Comments must be received on or before May 27, 2014.
