Making Whitefly & Predator Counts

Tim Vandervoet¹, Peter C. Ellsworth², Lydia M. Brown², Alfred J. Fournier² & Steven E. Naranjo³ ¹NZ Plant & Food Research, ²Univ. Arizona, ³USDA

Counting Whiteflies

- Sample 30 leaves (15 from 2 areas in the field).
- Score leaf with 3 or more adults as infested.
- Score disc (7/8 inch diameter) as infested if any live, large nymphs are present.
- Sum infested leaves. Sum infested discs. See column 1 in Tables.
- Determine percent infested leaves & discs from tables. See column 2.
- Obtain corresponding average number of adults per leaf and nymphs per disc. See column 3.
- Use fully selective products when there are at least 1 nymph per disc and 3–5 adults per leaf.
- For all other chemistry, spray at 5 adults per leaf.

Sweep Nets

Our cotton industry standard sweep net should be 15 inches (38 cm) in diameter with a strong galvanized metal hoop frame, sturdy wooden ≥2 foot (60 cm) dowel handle with a strong, reinforced canvas bag. Guidelines depend on 100 sweeps total, usually taken as four subsamples of 25 sweeps each.

Counting Predators

Invert the net and push the pinched off tip of the net through the opening of the net, slowly releasing your grip to allow insects to crawl or fly out. Count the predators (*Geocoris* big-eyed bugs, lacewing larvae, *Collops* beetles, crab spiders, *Orius* minute pirate bugs, and/or *Drapetis* flies) (Fig. 1). Plant material can be slowly lifted out, inspected and discarded. Once all the plant material is sorted, thoroughly inspect the net seam for any remaining predators using a hand lens if necessary. Compare counts of each of the 6 predators per 100 sweeps to the adjacent tables. See columns 4–7.

Any recommendations, services, or organizations that are mentioned, shown, or indirectly implied in this publication do not imply endorsement by the USDA, Cotton Incorporated or the University of Arizona.

Figure 1. The six key predators of whiteflies found in cotton. Tracking their numbers in your sweep counts will help remove uncertainties in decision-making.

Using the Threshold - Predator Tables

- 1. Locate the field counts of number of leaf discs (for large nymph counts) and the number of leaves (for adults) infested with whiteflies in the appropriate tables below. See columns 1–3.
- 2. Compare predator field counts (per 100 sweeps) for each predator species against the levels needed to provide biocontrol of whiteflies. Each predator count is considered independently. See columns 4–7.

	Whitefly Levels	Spray Decisions
White	Below Threshold	No need to spray or count predators
Yellow	Approaching Threshold	Count 1 or more predators ≥ numbers in table; Defer Spray
Green	At Threshold	Predators All 6 predators < numbers in table; Spray
Red	Above Threshold	Spray regardless of predator densities

Whitefly Large Nymphs			Predators per 100 Sweeps				
(1) (2) (3)			Minimum number needed to provide biocontrol				
Number of discs	Percent		(4)	(5)	(6)	(7)	
infested with	infested	Average	Big-eyed bug	Collops beetle	Crab spider	Drapetis fly	
large nymphs	discs	per disc					
4 13 0.2			Whitefly numbers are far too low; No need to spray or count predators				
5	17	0.3	1	1	2	14	
6	20	0.3	1	1	2	14	
7	23	0.4	1	1	2	18	
8	27	0.5	1	1	2	22	
9	30	0.6	1	2	3	27	
10	33	0.7	1	2	3	31	
11	37	0.8	1	2	3	36	
12	40	1.0	1	2	4	44	
13	43	1.1	1	3	4	49	
14	47	1.2	1	3	5	53	
15	50	1.4	2	3	5	62	
16	53	1.6	2	4	6	71	
17	57	1.8	Whitefly numb	ers are too high; Spr	ay regardless of pr	edator numbers	

Whitefly Adults			Predators per 100 Sweeps				
(1)	(2) (3) Minimum number needed to provide biocontrol						
Number of leaves	Percent		(4)	(5)	(6)	(7)	
infested with 3 or	infested	Average	Lacewing larva	Crab spider	Minute pirate bug	Drapetis fly	
more adults	leaves	per leaf					
3	3 10 0.8 Whitefly numbers are far too low; No need to spray or count preda						
4	13	1.0	1	1	2	8	
5	17	1.3	1	2	2	11	
6	20	1.5	1	2	3	12	
7	23	1.8	1	2	3	15	
8	27	2.1	2	3	4	17	
9	30	2.3	2	3	4	19	
10	33	2.6	2	3	4	21	
11	37	2.9	2	3	5	24	
12	40	3.2	2	4	5	26	
13	43	3.6	2	4	6	29	
14	47	3.9	2	4	6	32	
15	50	4.3	3	5	7	35	
16	53	4.7	3	5	8	38	
17	57	5.1	3	6	8	41	
18	60	5.5	Whitefly numbe	rs are too high; S	Spray regardless of pre	dator numbers
