RNR 355 - INTRODUCTION TO WILDLAND FIRE

INSTRUCTOR: KIT O'CONNOR

MWF 1100-1150, BioEast 225

Introduction to Wildland Fire provides students with a broad, balanced understanding of fire as a biophysical process. We explore fire from many perspectives, including physics, chemistry, ecology, biogeography, natural resource management, and policy.

We strive to make our study of fire interesting and relevant in the contemporary world by examining how climate change, invasive species, and land use influence the ways that fire interacts with the landscape.
